Optimize your organization's IT infrastructure with our Health Checks

Your IT infrastructure is the backbone of your business operations. Any processes that are sub-optimized or glitchy can cause disruptions, wasted resources and even loss of revenue. Completing a periodic health check can give you an in-depth view into your existing IT environments and provide you actionable insights.

How our Health Checks can help your organization

By reviewing your IT environment relative to industry standards and best practices, our Health Checks can:

- ◆ **Identify potential problems and vulnerabilities in your infrastructure before they arise**
- ◆ **Protect against future losses due to downtime and poor productivity**
- ◆ **Provide valuable insights into the lifecycle of your IT infrastructure**
- ◆ **Validate the quality of a previously completed IT project**
- ◆ **Help improve IT awareness within your organization**

Microsoft Azure Health Check

While Microsoft Azure is paramount to an organization's business processes, it can be a complex system with multiple potential issues and policies to keep in check.

Examine key areas of your Microsoft Azure environment to determine resource utilization, compliance, potential security vulnerabilities, and opportunities for cost savings. We include a comprehensive multi-point analysis in a Red, Amber, Green format, of your Microsoft Azure Environment with an attribute-by-attribute status description, associated business impact, and recommendations for remediation.

Microsoft 365 Tenant Health Check

With Microsoft 365 being the cornerstone of modern collaboration and productivity tools, ensuring the tenant is configured correctly is important.

Designed to review the user management, domain, Azure AD, basic Office 365 and basic security aspects of your organization's Microsoft 365 tenant, this Health Check would identify potential issues such as incorrect/deprecated policies, unutilized licenses, improper configurations and more. Through a final tenant review report, we would summarize our findings and provide recommendations for your organization to improve the health of its Microsoft 365 tenant.
